

State of Delaware Office of the Auditor of Accounts Kathleen K. McGuiness, RPh, CFE State Auditor

Working Hard to Protect YOUR Tax Dollars

Inspection

Fiscal Year 2019 Purchase Card Performance Metrics

May 20, 2020

We performed an inspection to compare the Purchasing Card (Pcard) program by state agency and school district. We identified agencies as "Best Practice" or "Needs Improvement" according to key performance measures. Additionally, we calculated a potential cost-avoidance savings if a portion of State checkbook transactions were converted to PCard transactions. Our study determined that the benefit of the processing-cost savings far exceeds the potential rebate.

PCard – Purchasing Card SUA – Single Use Account

The mission of the Delaware Office of the Auditor of Accounts

The Delaware Auditor of Accounts serves Delawareans by ensuring accountability in the use of taxpayer dollars through independent assessments of financial operations, performance management and statutory compliance of state government.

For further information on this release please contact: **Kathleen McGuiness, RPh, CFE**

Kathleen.McGuiness@delaware.gov (302)-739-5055

Background

In our report dated March 18, 2019, "Purchase Card Inspection, Fiscal Year 2017 – Full Report", we recommended the State consider increasing PCard use to maximize potential rebate savings. We estimated that the State could generate \$1.6 million in revenue from additional credit card rebates if it redirected \$66.0 million in checkbook transactions to the PCard program.

Pcard transactions are recognized as having lower per-transaction processing costs. Organizations are finding it more costly to process a large number of low-value transactions; therefore, the focus of our study was small dollar transactions defined as those under \$2,500.

We designed this inspection to determine if the cost savings can be significantly greater than the rebate. The average administrative cost of traditional payment is approximately \$90 versus about \$20 for PCard transactions, according to a study conducted by RPMG Research Corporation in 2014.¹ Private company and government reports frequently cite this report in estimating a cost avoidance savings per PCard transaction of approximately \$70. A cost study performed at the Washington State Department of Transportation estimated a cost savings per PCard transaction of approximately \$44.² A third study conducted on Harford County Public Schools of Maryland, estimated a cost savings of \$59.³

This engagement is not a code-mandated audit that our office is required to perform. We chose to perform this study as a practice aid to train new auditors on our data analytics software as well as to support the Government Efficiency & Accountability Review Board (GEAR) initiatives related to the State PCard program.

According to the Government Finance Officers Association, the benefits of PCard programs include:

- 1. Simplified purchasing and payment process;
- 2. Lower overall transaction processing costs per purchase;
- 3. Increased management information on purchasing histories;
- 4. Reduced paperwork;
- 5. Decentralized procurement function;
- 6. The ability to set and control purchasing dollar limits;
- 7. The ability to control purchases to specific merchant categories and vendors; and
- 8. Receipt of rebates from the bank based upon dollar volume of total purchases.⁴

Delaware's PCard

The PCard is designed to effectively meet most purchasing and travel needs. It is intended to streamline and simplify the purchasing and accounts payable functions by eliminating waste and low-value activities, ultimately, reducing transaction costs and improving vendor relations.

Another method of vendor payment used by the State is Single-Use Accounts (SUA). As an electronic payment method, the SUA contains the functionality of a check and credit card. The SUA generates a unique card number for the supplier to run the transaction and is only available for a specified amount of

time. Currently, J.P. Morgan administers the State's SUA. The State receives the same rebate from SUA as PCard usage. Since we analyzed PCard use compared to traditional forms of payment, we have excluded SUA transactions from our study.

Report Details

We designed our study to analyze the PCard program by state agency and school district through the calculation of key PCard program performance measures. We imitated key metrics used in "*The State of the P-Card*", *Gupta, Markus, and Palmer, 2011.*⁵ Similar to that study, we calculated the following:

- Number of transactions under \$2,500 made on the PCard as a percentage of the number of total transactions under \$2,500
- Number of transactions between \$2,500 (including \$2,500) and \$10,000 made on Pcards as a percentage of the number of total transactions between \$2,500 and \$10,000
- Agency PCard spending as a percentage of the total amount spent by the agency

We calculated the three metrics listed above for each agency and school district. We also ranked each organization on each of these three metrics and assigned each to a quadrant according to its performance. Similar to the methodology of the "*State of the PCard*" study, we defined "Best Practice" programs as those that have reported at least one top quartile (and no bottom quartile) metric across 3 key PCard performance measures. The "Needs Improvement" programs report at least one metric at the bottom quartile and none in the top. Appendix A lists the results for each agency, school district and charter school. We have also indicated whether each organization's PCard program is considered "Best Practice" or "Needs Improvement" according to our analysis. We have also included additional performance and activity measures for consideration.

A review of the classification of agencies in Appendix A indicates that 14 of the 24 "Best Practice" organizations are traditional state agencies. The "Best Practice" classification also includes 10 charter schools.

The "Needs Improvement" group is comprised primarily of school districts and charter schools. Of the 25 organizations in this grouping, only two are traditional state agencies and three are offices of other elected officials of the state. The other 21 organizations are school districts and charter schools.

For analysis purposes, we have segregated the state agencies from the school districts and charter schools. The table below illustrates key differences between the average "Best Practice" group as compared to the average "Needs Improvement" group.⁶ This grouping includes state agencies, other state elected offices and Delaware Technical Community College.

⁵ Gupta, Markus, and Palmer (2011), 'The State of the P-Card', *GoPro The Official Publication of NIGP*, pp. 52-56 ⁶ Gupta, Markus, and Palmer (2011), 'The State of the P-Card'

Cost Savings

Another goal of this study was to calculate an estimated cost-avoidance savings the State could generate by converting a portion of checkbook transactions to PCard transactions and to determine whether this cost savings is greater than the potential rebate. We estimated the amount of traditionally processed items that are eligible to be converted to Pcard transactions as well as the potential cost savings per transaction.

To determine how many transactions are eligible for this conversion, we focused on small dollar items, which would potentially have a high processing cost to the size of the transaction. We reviewed all transactions processed during the State's fiscal year, from July 1, 2018 to June 30, 2019, and determined how many under \$2,500 were processed during that time period. Those results are listed in Appendix B. We found that 1,216,471 checkbook transactions under \$2,500 were processed. These transactions in total were \$388,768,116.

To be conservative, we estimated that only five percent of these transactions are eligible for conversion to Pcard for processing. Therefore, our assumption is that 60,790 of 1,216,471 checkbook transactions are

potentially eligible to be converted to Pcard transactions. We also estimated that these transactions totaled \$19,438,406, or five percent of the total (\$388,768,116 from above).

In calculating the potential cost savings per transaction, we referenced a number of research studies which found transaction savings ranging from \$44 to \$70. To be conservative, we are using the smallest estimated cost savings per transaction \$44 as the differential between the two payment methods. Using these assumptions, we estimate that the State could generate an annual cost-avoidance savings of approximately \$2.6 million if five percent of these checkbook transactions were converted to PCard transactions.

We estimate that these transactions would have generated an additional \$50,218 in rebates, based on a percentage of the Fiscal Year 2019 rebate.

The estimated cost avoidance savings of \$2,674,760 far exceeds the potential rebate to be generated as a result of converting five percent of checkbook transactions to the PCard.

Conclusion

According to the most conservative of the benchmarks we cited, the processing costs for small dollar transactions (under \$2,500) approximate 10% of the cost of the purchased item. While the State benefits greatly from the PCard rebate program, the potential cost-avoidance savings from additional PCard use is much more significant.

As a whole, the State would benefit from increased use of the PCard for small dollar transactions. It appears that many school districts and charter schools are not fully benefitting from efficiencies and cost savings associated with the State's PCard program.

Recommendations

PCard Usage

We recommend that the Division of Accounting assist all state agencies, charter schools, and school districts by promoting the use of PCards for eligible small dollar transactions. This would help the State realize available rebate revenues and generate cost savings from efficiencies in PCard processing.

Objective, Scope, and Methodology

Objective:

Similar to the study "*The State of the P-Card*", *Gupta, Markus, and Palmer, 2008*,⁷ our objectives were to:

- Analyze the State's PCard program through key performance measures;
- Rank and assign agencies to "Best Practice" and "Needs Improvement" groups based on performance
- Identify key PCard program differences between the two groups; and
- Quantify a potential cost-avoidance savings if a percentage of State checkbook transactions were converted to PCard transactions

Scope:

The scope of the inspection was PCard and checkbook transactions for Fiscal Year Ending June 30, 2019.

Methodology:

Our procedures consisted of the following:

- Document reviews, including applicable laws and regulations, agency policies and procedures pertaining to study objectives, and published reports, audits or studies on relevant topics
- Data analysis, which may include data collected by agencies and/or data compiled by the Office of the Auditor of Accounts. Data collection may involve surveys or focus groups.
- Site visits to agencies and school districts that are under review.
- Interviews with employees, agency representatives, and other relevant organizations or individuals.

State of Delaware

Inspection – Fiscal Year 2019 Purchase Card Performance Metrics

The Department of Finance/Division of Accounting is appreciative of the efforts of the Office of the Auditor of Accounts in performing this inspection of the program, highlighting the cost savings to the State by converting transactions from traditional check payment to the purchasing card program. The Division of Accounting (DOA) continually promotes both the use of the PCard by State Organizations and the enrollment of vendors in the Single Use Account (SUA) program.

As a key participant in the Government Efficiency and Accountability Review (GEAR) Board, DOA actively reviews policies, procedures and programs for both cost savings and efficiencies. As part of this effort, DOA joined with the Office of the State Treasurer (OST) for an RFP for banking services that resulted in increased rebates for the card program. We are also working with OST to develop promotional information on the benefits of the State's electronic payment programs. In addition, DOA actively participates in several multi-state information sharing groups for purchasing and electronic payment programs to continually enhance our efforts and best practices for card usage. And finally, over the past several months, DOA has worked with JPMorgan Chase, our program provider, to actively recruit new vendors to the SUA program.

Thank you for the opportunity to provide our input and we look forward to receiving suggestions and recommendations on additional ways to actively promote the card program to create time efficiencies and cost savings for the State.
